

As an XM subscriber and over the road professional truck driver, the instant traffic and weather channels have been EXTREMELY helpful and an added safety feature that I have used on a continual basis that I would not have access to any other way.

When we as professional drivers know in advance of adverse conditions, we will do all we can to avoid these situations, thus remaining safer ourselves and not adding danger and congestion to others.

XM makes this possible by simply pushing a button and we have uninterrupted service well ahead of when we arrive in the area, whereas before we had to hunt for something and maybe be lucky enough to find weak coverage.
